Protocol converters and IoT gateways bridging Modbus, M-Bus, and MQTT in Dubai are available through specialized industrial automation and smart building suppliers in the UAE (such as [ConnectME Manufacturing LLC](#) located in Al Quoz). These multi-protocol gateways translate wired meter bus (M-Bus) utility data and industrial Modbus (RTU/TCP) signals into lightweight MQTT payloads for cloud platforms like AWS or Azure.

Core Functions & Capabilities

- M-Bus to Modbus/MQTT:** Collects data from utility meters (water, gas, electricity) running on the EN 13757-2/-3 M-Bus standard and maps them into Modbus registers or publishes them to MQTT.

Utility management and real estate software for property developers in Dubai automates tenant sub-metering, district cooling and DEWA bill validation, expense forecasting, and energy tracking. Top enterprise platforms utilized in the UAE include [Yardi Systems](#), [MRI Software UAE](#), and Microsoft Dynamics-based solutions like [Dynamic Netsoft](#).

## Key Features to Look For

- **Sub-metering & Billing:** Automated calculation of electricity, water, and BTU/district cooling consumption per tenant.
- **Local Compliance:** Integration with UAE VAT, corporate tax, and Ejari regulations.

Expense Forecasting: Real-time budget tracking and automated reconciliation.

An IoT gateway for meter data collection in Dubai **bridges local electricity, water, gas, or BTU meters to central software or cloud platforms**. Regional deployments rely on specialized hardware communicating via protocols like Modbus, M-Bus, or LoRaWAN, provided by local integrators such as [ConnectME](#) and [GoSwitchgear](#). 

## Core Functions &amp; Protocols

- **Data Collection:** Gathers real-time consumption values from multi-tenant or industrial meters.
- **Interface Support:** Uses wired RS485/Modbus, M-Bus, or wireless LoRaWAN and NB-IoT.
